Mouhanned Mejri

Final-year Computer Engineering Student | LLM Agents | RAG | Full-Stack AI Products (Python, FastAPI, TypeScript)

Tunis, Tunisia | +216 23 131 860 | Mouhannedmejri10@gmail.com | linkedin.com/in/mouhanned-mejri | github.com/mouhannedmejri | portfolio | codeforces-Specialist

Profile

Engineering student at ENSIT building LLM, RAG and multi-agent applications end to end (2nd place of 12 teams, Talan Summer Camp 2026), with two internships and three shipped full-stack platforms. Seeking a 4–6 month applied-AI / agent-engineering internship (PFE) starting February 2027.

Education

ENSIT – Higher National Engineering School of Tunis, University of Tunis | Engineering Degree in Computer Engineering Sep 2024 -February 2027

- Average: 13.86/20 | Rank: 13/55
- Relevant courses: Machine Learning, Artificial Intelligence , Probability & Statistics (15/20), Optimization (16.33/20)
- Monastir Preparatory Engineering Institute, 2022-2024, national entrance exam rank 491/2271

Professional Experience

Software Development Intern | Talan Summer Camp, Tunisia Summer 2026

- Co-built **Navi**, an AI accessibility assistant that detects interaction difficulties, adapts interfaces and enables natural-language web navigation, in a team of 10; **2nd place of 12 teams**.
- Agents I personally built: active detection, user profiling and the FastAPI backend; shipped React Native/Expo and Plasmo browser clients.
- Integrated speech, vision-language and web-content tools to automate web actions.

Software Development Intern | Krenova Consulting, Tunisia 2025

- Built an automotive spare-parts e-commerce platform (React, TypeScript, Tailwind CSS) and contributed to its AI recommendation assistant.

Selected Projects

BugHunting – AI-Assisted Bug Bounty Platform | Next.js, TypeScript, PostgreSQL, Prisma, Python 2026

- Built an LLM + RAG triage pipeline that flags spam, fraudulent and low-quality vulnerability reports.
- Implemented role-based workflows for researchers, clients and reviewers with a severity-tiered bounty system.

Apex Arena – Competitive Programming Platform | 2026

- Developed team contests, tournament brackets, rankings and promotion/relegation mechanics (32 teams (team of 3) contest and 1v1 team qualifications).

Research & Technical Projects

Few-Shot Medical Image Classification under Class-Imbalanced Query Sets | Present

- Built a reproducible evaluation pipeline comparing three inductive and transductive classifiers (nearest-prototype, logistic-regression linear probe, TIM-style transductive inference) on frozen features from DINOv2, CLIP and ResNet50, across 1/5/10/20-shot settings on BloodMNIST (PathMNIST for the cross-center test), in PyTorch, with 300+ sampled episodes and 95% confidence intervals.
- Applied the Dirichlet-sampled imbalanced-query protocol of Veilleux et al. (NeurIPS 2021) to medical data to test how transductive methods behave when the query set is class-imbalanced.

CardioAgent-Ops: Containerized Cardio-Acoustic Analysis Platform | team size:3 / own role: LLM Fine-tuning and MLflow

- Built 6 Dockerized microservices (LLM server, vector DB, audio engine, agent orchestrator, API gateway, MLflow) analysing PCG heart sounds .
- Benchmarked 5 audio classification algorithms with ONNX export, fine-tuned the model with QLoRA and added RAG over ESC guidelines with LangGraph agents.
- Automated tests (Pytest) and CI/CD (GitHub Actions); experiments tracked in MLflow.

Leadership

- **Project Manager**, IEEE ENSIT Computer Society Chapter (2024–2025): requirements analysis, task allocation and milestone tracking for a team of 10.
- **Webmaster**, IEEE ENSIT Student Branch (2024–2025): maintained the branch website.
- **Programme Manager**, TomorrowLand 2.0 IT Event (2025): planned workshops, competitions and schedule for 50

participants.

Technical Skills

- **ML & LLM:** PyTorch, scikit-learn, NumPy, Hugging Face; LLMs, RAG, QLoRA fine-tuning, agent orchestration (LangGraph), prompt design, few-shot learning, multimodal AI
- **Languages:** Python, C++, TypeScript, JavaScript, SQL
- **Frameworks:** FastAPI, Flask, Next.js, React, React Native, Expo, Plasmo
- **MLOps & infrastructure:** Docker, MLflow, ONNX, GitHub Actions, Pytest, PostgreSQL, Prisma, Git

Achievements & Languages

- 2nd place of 12 teams – Talan Summer Camp 2026 | Top 20 of 100 teams – TCPC 2026 | Codeforces Specialist, max rating 1490 (handle: chafi9_)
- Cisco CCNA 1 and CCNA 2 certified
- **Languages:** Arabic (native), French (fluent), English (fluent), German (basic)
